- Secured Lead Investor for Bridge Round

CERTIFICATIONS

Decentralized Finance: The Future of Finance Specialization, Duke University

October 2023

Product Management for Engineers, Cornell University

March 2021

WORK EXPERIENCE

Senior Manager, Product and Partnerships, [SLAMai](#) | New York, NY

March 2022 - Present

- Launched an AI agent and native token, backed by a REST API suite and MCP server delivering B2B DeFi data on EVM blockchains, with the token reaching a \$27M market cap.
- Spearheaded the development and launch of innovative Web3 solutions, leading cross-functional teams and contributing hands-on engineering to meet key milestones and strategic goals.
- Fostered partnerships with external blockchain entities and Web3 protocols, bolstering the company's position and success in the decentralized tech sphere.

Product Manager, [Health-E Commerce](#) | New York, NY

July 2017 - June 2021

- Conceptualized, scoped, and led development of an integrated shopping experience (ISE) within an industry-leading healthcare benefit software provider (B2B). This allowed for participant single sign-on (SSO), product browsing and checkout without ever leaving the portal. The first-year of revenue through ISE totaled \$2M and was growing as more benefit providers (the benefit software users) enabled ISE.
- Led B2B2C product roadmap through collaboration with internal sales team and third party administrative (TPA) partners. Hosted partner calls to discuss needs and interests, as well as provided implementation details of various available embeddable products for their client portals with health-benefit participants as the end user.
- Transitioned 10-year-old homegrown e-commerce platform to Salesforce Commerce Cloud. This involved creating product requirement documents for all existing features to outline how they communicated between systems, whether in-house back-end infrastructure or third party software.

Website Development Intern, [Brandthropy](#) | Burlington, VT

January 2017 - May 2017

- Orchestrated front-end and back-end development through WordPress and Drupal of contracted websites maintained by Brandthropy. This allowed me to gain a comfortable understanding of GitHub using the command line interface.

Information Technology Intern, [Vermont HITEC](#) | Williston, VT

May 2016 - August 2016

- Worked in a two-person development team to create a mobile application that allowed employers and educators to connect on mutual interests and communicate event arrangements.
- Computerized Vermont HITEC's orientation check-in process allowing for applicant search and name tag printing functionality in conjunction with a database.
